Earthquake!

Pupil sheet

Name: _____ **Date:** _____

Safety: I hold the box with both hands; I never throw it or shake it near classmates. I stay seated, with space around me.

1. What I see on the screen

You have to cross the school and reach the assembly point in the yard.

The rules: the P wave warns you a few seconds ahead; during the shaking you can *barely move*, so you take cover where you are and travel only in the calm. You have three lives; at the end, the screen shows what hit you.

Three kinds of shelter: under the table, in the corner beside an interior wall, or in the doorway. **They are not equally good** — and which is best is today's question.

2. What I do on my own

My vote, before playing. I do not change it afterwards.
In a real earthquake, I think the safest place is: ☐ under the table ☐ in the corner ☐ in the doorway

because _____

_____

Three rounds, one shelter each. In each round I take cover *only* at the same kind of place. **I record the lives left, not the points** — the points include how far I got, and that is not what I am testing here.

Shelter used	Lives left	What hit me most often
Under the table only		
In the corner only		
In the doorway only		

My ranking, best to weakest: 1. _____ 2. _____ 3. _____

There was no shelter in the hallway. What did I do? _____

3. What I do on my own

Now the room I am sitting in. I draw its plan: the door, the windows, the desks, the cupboards. **In green**, where I would take cover. **In red**, the windows, the unsecured cupboards and everything heavy up high.

I found _____ red places — more than I expected: ☐ yes ☐ no
In my school's hallway I would take cover _____

My school's assembly point: _____

4. The conclusion I write

At the start I voted that _____

_____

The rounds show that _____

_____

In the game you run through the school, but in real life _____

_____

Exit ticket

Point out, in this room, the place you would take cover. Why not the door?

_____
