

Weather Station

Student sheet

Name: _____

Date: _____

1. What I see on the screen

Five cards: **Temperature**, **Humidity**, **Pressure**, **Altitude**, **Dew point**. The **Live Charts** tab has three charts, each with **Filter ON/OFF**, **Pause** and **Clear**. You save with **Export data**, at the top right. **There is no green button here, no Back, no Finish.**

Watch the Analysis tab. The pressure row says “Nice weather” above 1013 hPa and “a storm may be coming” below. **It does not look at history** and it does not know the school’s altitude — **the forecast is read from the trend. Wait 10 min** after any move. Do not breathe into the box.

2. What I do on my own

Station: _____ **Box:** _____ **School’s altitude:** _____ m

First I predict, before the first day. I do not change the prediction afterwards. 1.

Before it rains, the pressure will ☐ rise ☐ fall ☐ stay the same, because _____

2. The humidity in the classroom will be ☐ bigger ☐ smaller than outdoors. **3.** I will get _____ forecasts out of 10 right.

One day’s pressure chart (glued in or drawn here). Mark the steepest section. Pressure ☐ ↑
☐ ↓ ☐ → (*rising, falling, steady*)

Predicts: _____

Daily recording sheet. One row per reading, at fixed times. **The room’s state is written down with the number**, not later.

Date	Time	T (°C)	RH (%)	P (hPa)	T_d (°C)	Room state (windows, heating, how many people)

The tendency. Example: $1006.2 - 1008.4 = -2.2$ hPa in 3 hours, so $-2.2/3 = -0.73$ hPa/h — a rapid fall, so cloud and rain.

Mine: _____ - _____ = _____ hPa in _____ hours, so _____ hPa/h.

Forecast log. The forecast is written *before* seeing the next day. The actual weather is recorded as it was, using the criterion fixed on day one.

Date	Tendency (hPa/h)	My forecast for tomorrow	Actual weather	Correct?

Correct: _____ out of _____ “Tomorrow like today”: _____ out of _____ Did I beat it? ☐ YES ☐ NO

3. The conclusion I write

I predicted that, and the data show that _____

The relative humidity was very different, but the dew point was not, because _____

The 1013 hPa threshold does not work at our school because _____

Exit ticket

One thing that surprised you today, and one thing you would do differently if you repeated the measurement.
